

## **Abstract**

Educational institutions are facing challenges in managing student data, such as Attendance, Submissions (Assignments and Practical), Timetable and Submission Report. Manual data entry and processing can be time-consuming, error-prone, and inefficient.

We have designed our Web Application to address the administrative and data management needs of educational institutions. It computerizes and automates student data management including Attendance, Submissions (Assignments and Practical), Timetable and Submission Report reducing manual workloads and errors. This system is a tool designed to keep track of students presence in classes or educational institutions. It helps teachers and administrators to efficiently monitor and manage attendance records. The main purpose of such a system is to streamline the process of taking attendance by replacing manual methods like paper registers or calling out names with digital platforms for quick and accurate recording. This saves time and reduces the chances of errors in attendance tracking.
