Abstract

The Student Academic Progress Management System (WEBSITE) is a project designed to address the administrative and data management needs of educational institutions. This system aims to streamline the process of managing student information, including enrollment, attendance, grades, and personal details, in a digital and efficient manner.

The primary objective is to replace manual record-keeping methods with a user-friendly and automated system, reducing the workload on administrative staff and minimizing the likelihood of errors. This microproject focuses on creating a scalable, easy-to-maintain solution that can be customized to suit the specific requirements of educational institutions of varying sizes.
